

AI Usage DISCLOSURE FORM

1. Team Details

Team Name: Dhurandharr

Project / Product Name: Trail – The Smart Cursor That Understands What You Mean (Samsung PRISM GenAI Hackathon, Theme ID 5)

Organization / Institution (if any): Thapar Institute of Engineering and Technology, Patiala

Submission Date: 30 September 2026

2. AI Usage Declaration

Did your team use any Artificial Intelligence (AI) in developing this project? Yes

Yes. AI (Claude Code, model Claude Sonnet 5.5) was used for brainstorming during ideation, code generation, basic boilerplate code, UI/UX, README and content generation such as evaluation graphs. Final architecture decisions, integration and optimisation were done by the team.

3. Purpose of AI Usage (Brief Details)

Idea generation / brainstorming : Yes – used for brainstorming during ideation; final concept and architecture decided by the team

Code generation or assistance : Yes – code generation and basic boilerplate code (Claude Code, Sonnet 5.5)

UI / UX design : Yes – UI/UX for the Chrome and VS Code extensions

Content creation : Yes – README/documentation and content generation such as evaluation graphs

Data analysis : Not used

Testing / debugging : Not used as a primary tool – testing and optimisation done by the team

Other : None

4. Feature Origin Classification (Please add/delete based on the number of the feature)

1. Feature Name : Attention Trail (cursor / hover / dwell -> context)

2. Self-Generated/AI-Generated/Both : Both

3. Description (include AI tools/platform Used, prompt used , Output Summary, Modification)
AI tool: Claude Code (model: Claude Sonnet 5.5). Prompt: Exact prompts not retained; iterative natural-language prompts in Claude Code describing the required module/behaviour. Output: brainstormed concept and boilerplate for cursor/dwell capture and the attention-bus event pipeline (Python asyncio, Pydantic, WebSocket). Modification: team finalised the design, integrated it, tuned dwell thresholds and optimised the event flow.

1. Feature Name : Interrupt Arbiter (Resume / Patch / Park / Stop)

2. Self-Generated/AI-Generated/Both : Both

3. Description (include AI tools/platform Used, prompt used , Output Summary, Modification)
AI tool: Claude Code (model: Claude Sonnet 5.5). Prompt: Exact prompts not retained; iterative natural-language prompts in Claude Code describing the required module/behaviour. Output: code scaffolding for the arbiter and runtime handlers. Modification: team refined the classification logic, integrated voice/keyboard/cursor inputs and optimised latency.

1. Feature Name : Speculative Forks

2. Self-Generated/AI-Generated/Both : Both

3. Description (include AI tools/platform Used, prompt used , Output Summary, Modification)
AI tool: Claude Code (model: Claude Sonnet 5.5). Prompt: Exact prompts not retained; iterative natural-language prompts in Claude Code describing the required module/behaviour. Output: boilerplate for parallel fork execution. Modification: team added token/tool budgets, stale-fork killing and performance optimisation.

1. Feature Name : Interruptible Runtime (Checkpoint, Goal Stack, Saga / Rollback)

2. Self-Generated/AI-Generated/Both : Both

3. Description (include AI tools/platform Used, prompt used , Output Summary, Modification)
AI tool: Claude Code (model: Claude Sonnet 5.5). Prompt: Exact prompts not retained; iterative natural-language prompts in Claude Code describing the required module/behaviour. Output: base code for checkpointing, goal stack and rollback. Modification: team integrated, debugged and optimised the runtime.

1. Feature Name : Chrome Extension & VS Code Extension (UI/UX)

2. Self-Generated/AI-Generated/Both : Both

3. Description (include AI tools/platform Used, prompt used , Output Summary, Modification)
AI tool: Claude Code (model: Claude Sonnet 5.5). Prompt: Exact prompts not retained; iterative natural-language prompts in Claude Code describing the required module/behaviour. Output: UI/UX code and boilerplate for the Chrome (Manifest V3) and VS Code extensions.

Modification: team adapted the interface to the Trail workflow, connected it to the backend and optimised it.

1. Feature Name : Evaluation Graphs (Yield Latency, Correction Latency, Fork Hit Rate, Safety)

2. Self-Generated/AI-Generated/Both : Both

3. Description (include AI tools/platform Used, prompt used , Output Summary, Modification)
AI tool: Claude Code (model: Claude Sonnet 5.5). Prompt: Exact prompts not retained; iterative natural-language prompts in Claude Code describing the required module/behaviour. Output: code/content to generate the evaluation graphs. Modification: team reviewed the graphs and used them in the presentation.

1. Feature Name : README / Documentation

2. Self-Generated/AI-Generated/Both : AI-Generated

3. Description (include AI tools/platform Used, prompt used , Output Summary, Modification)
AI tool: Claude Code (model: Claude Sonnet 5.5). Prompt: Exact prompts not retained; iterative natural-language prompts in Claude Code describing the required module/behaviour. Output: README with project overview and reproducible setup instructions. Modification: reviewed and corrected by the team.

5. Ethical & Compliance Confirmation

AI usage complies with guidelines and policies. **Yes**

No proprietary or copyrighted data misused. **I Agree**

6. Declaration & Sign-Off

Name of Team Representative: Shresth Samyak

Role: Developer

Signature: 

Date: 30 September 2026
